VHBC Building Leisure Lifestyle Communities	Document No.	Section No.
	Effective Date:	Revision No.
	PROCEDURAL MANUAL	
	DOCUMENT CONTROL MANAGEMENT	

OBJECTIVE	To establish, implement, and maintain a system to prevent accidents, protect the environment, and ensure the health and safety of workers, visitors, and the community during the construction process.
SCOPE	This procedure includes the process

Responsibility	Activities		Documents
Design Engineering Team	Define Document Categories and Type	Note 1	*Document Classification Framework* *Coding System*
Board of Directors	Appoint a Document Controller	Note 1	-
	Establish a Document Register		*Document Register accessible to authorized personnel only*
Design Engineering Team	Document Creation and Revision	Note 1	*Approved and properly version-controlled documents*
	Document Distribution and Access		*Distribution log*
	Document Storage and Retrieval		*Digital/physical storage system*
	Document Revision and Updates		*Up-to-date documents* *Revision history logs*
	Document Archiving and Retention		*Archived documents with clear retention label and disposal log*
	Auditing and Continuous Improvement		*Audit report* *Updated document control procedure*

1. [Define Document Categories and Types]
Purpose: Organize documents based on their purpose and usage.

Steps:

a. Categorize documents into groups such as:
   - Project Documents: Drawings, contracts, specifications, schedules.
   - Administrative Documents: Correspondence, permits, meeting minutes.
   - Financial Documents: Invoices, purchase orders, payment records.
   - EHS Documents: Risk assessments, safety reports, compliance certificates.

b. Define document types within each category (e.g., architectural drawings, structural drawings).

c. Create a coding system to uniquely identify each document (e.g., project code, document type, version number).

Deliverable: Document classification framework and coding system.

2. [Appoint a Document Controller]
Purpose: Ensure accountability for document management.

Steps:

a. Assign a dedicated Document Controller (or team) responsible for document control.

b. Define their roles, including:
   - Reviewing and approving documents for consistency.
   - Maintaining the Document Register.
   - Ensuring timely distribution and retrieval of documents.

c. Provide training on document control procedures and tools (e.g., document management systems like Procore or Aconex).

Deliverable: Document Controller assignment and training completion records.

3. [Establish a Document Register]
Purpose: Track and monitor the status of all documents.

Steps:

a. Create a central Document Register (manual or software-based) with fields such as:
   - Document name and code.
   - Version/revision number.
   - Date of creation, approval, and revision.
   - Responsible person or department.
   - Status (e.g., Draft, Approved, Archived).

b. Update the register whenever documents are added, revised, or removed.

Deliverable: Document Register accessible to all authorized personnel.

4. **[Document Creation and Revision]**
Purpose: Standardize the process for generating and updating documents.

Steps:

a. Create Drafts:
   - Use approved templates to ensure uniformity in formatting and content.
   - Assign a unique document code for identification.

b. Review:
   - Send drafts for review by relevant stakeholders (e.g., project manager, engineers).
   - Incorporate feedback and resolve comments.

c. Approval:
   - Obtain final approval from authorized personnel (e.g., QA/QC manager).
   - Stamp or mark the document as “Approved” with a date.

d. Version Control:
   - Track revisions by assigning version numbers (e.g., V1.0, V1.1).
   - Maintain an audit trail of changes for accountability.

Deliverable: Approved and properly version-controlled documents.

5. **[Document Distribution and Access]**
Purpose: Ensure timely distribution and controlled access to documents.

Steps:

a. Distribution:
   - Circulate documents to relevant parties (e.g., contractors, consultants) via email or document management systems.
   - Maintain a distribution log with recipient details and dates.

b. Access Control:
   - Assign user roles and permissions (e.g., view-only, edit) based on responsibilities.
   - Use password-protected systems or shared drives for secure access.

c. Notifications:
   - Notify stakeholders about new or updated documents.

Deliverable: Distribution log and controlled access system.

6. [Document Storage and Retrieval]
Purpose: Safeguard documents and ensure quick retrieval when needed.

Steps:

a. Digital Storage:
   - Store documents in a cloud-based system or centralized server.
   - Use structured folders with naming conventions for easy navigation.

b. Physical Storage:
   - For hard copies, use labeled folders and filing cabinets.
   - Store critical documents in a fireproof, waterproof location.

c. Retrieval Process:
   - Use the Document Register to search for and retrieve documents quickly.
   - Implement a sign-out system for physical documents.

Deliverable: Organized digital/physical storage system and retrieval logs.

7. [Document Revision and Updates]
Purpose: Maintain the accuracy and relevance of documents.

Steps:

a. Schedule Regular Reviews: Periodically review documents to ensure they remain accurate and compliant with current requirements.

b. Initiate Revisions:
   - Mark outdated documents as “Superseded.”
   - Create new versions with updated content.

c. Communicate Changes: Notify stakeholders of the revised versions and ensure old versions are no longer in use.

Deliverable: Up-to-date documents and revision history logs.

8. [Document Archiving and Retention]
Purpose: Preserve records for future reference and compliance purposes.

Steps:

a. Archiving:
   - Move completed or inactive documents to an archive folder.
   - Label archives with retention periods (e.g., “Keep for 5 years”).

b. Retention Policy:
   - Define retention periods based on legal, contractual, or company policies.
   - Dispose of expired documents securely (e.g., shredding, permanent deletion).

Deliverable: Archived documents with clear retention labels and a disposal log.

9. [Auditing and Continuous Improvement]
Purpose: Ensure compliance with document management standards and improve processes.

Steps:

a. Conduct Audits:
   - Regularly audit the document control system to verify accuracy and compliance.
   - Identify gaps (e.g., missing approvals, outdated documents).

b. Feedback and Updates:
   - Collect feedback from users on the ease of document management.
   - Update procedures to address identified issues or inefficiencies.

Deliverable: Audit reports and updated document control procedures.
