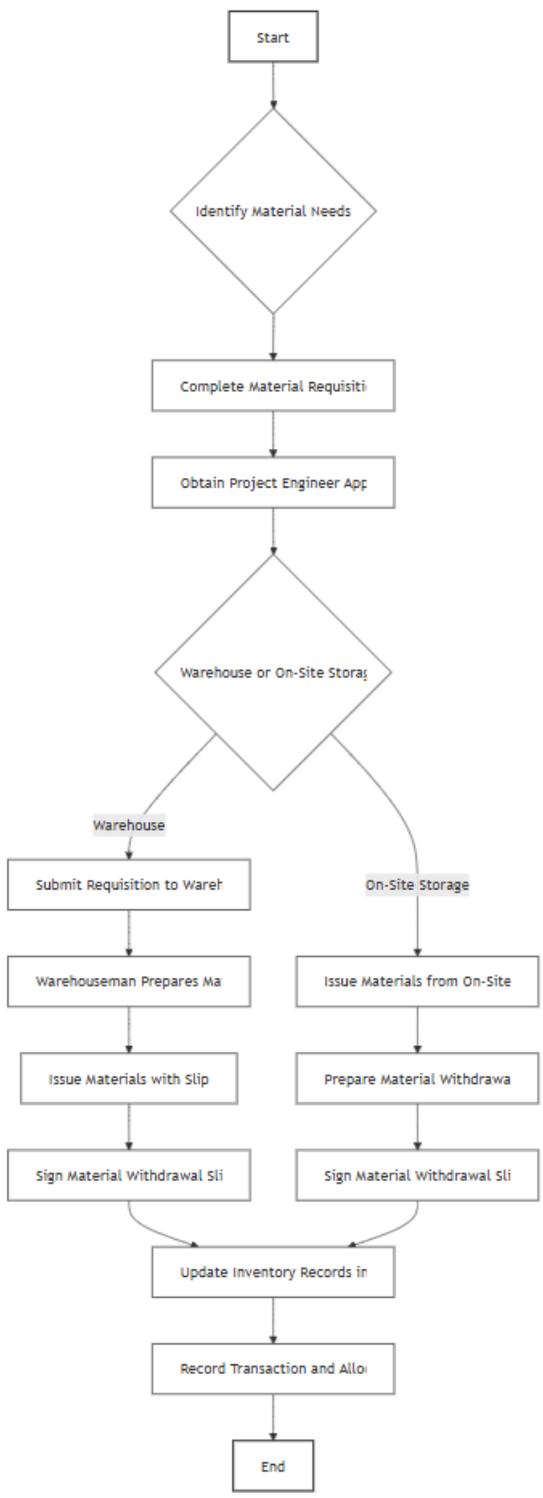
	PROCEDURAL MANUAL	
	MATERIAL REQUISITION AND ISSUANCE	

OBJECTIVE	This procedure outlines the process for requisitioning and issuing materials from BHBI's warehouse or on-site storage areas. The aim is to ensure that materials are properly tracked, allocated to the correct projects, and used efficiently. It includes the use of Material Requisition Forms, Material Withdrawal Slips, and the QNE system for inventory management.
SCOPE	This procedure applies to all materials stored in BHBI's warehouses or on-site storage areas and issued for use on projects.

Responsibilities

- **Project Engineer:** Responsible for approving material requisitions and ensuring that materials are used for their intended purpose.
- **Site Engineer:** Responsible for requisitioning materials needed for construction activities on site.
- **Warehouseman:** Responsible for issuing materials from the warehouse (or on-site storage), maintaining accurate inventory records in QNE, and processing Material Withdrawal Slips. Reports to the Site Engineer.
- **Foreman/Construction Workers:** Responsible for requesting materials and using Material Withdrawal Slips.
- **Office Engineer:** Responsible for maintaining records related to material requisitions and issuances.

Flowchart



Procedure

4.1. Material Requisition:

- **Identify Material Needs:** The Site Engineer, Foreman, or authorized construction personnel identify the need for materials based on construction activities and project schedules.
- **Complete Material Requisition Form:** The requester fills out a Material Requisition Form, specifying the type, quantity, and required date of the materials needed. They also indicate the project number or work area to which the materials should be charged.
    - **Deliverables:** Material Requisition Form
- **Approval:** The Project Engineer reviews and approves the Material Requisition Form, ensuring that the requested materials are necessary and within the project budget.

4.2. Material Issuance:

- **Warehouse Issuance (if applicable):**
    - The approved Material Requisition Form is submitted to the Warehouseman.
    - The Warehouseman locates the requested materials and verifies their availability.
    - **Prepare Material Withdrawal Slip:** The Warehouseman prepares a Material Withdrawal Slip, documenting the materials being issued, the project number, the date, and the names of the issuer and receiver.
        - **Deliverables:** Material Withdrawal Slip
    - The Warehouseman issues the materials to the requester along with the Material Withdrawal Slip.
    - Both the issuer (Warehouseman) and the receiver (requester) sign the Material Withdrawal Slip to acknowledge the transaction.
    - The Warehouseman retains a copy of the signed Material Withdrawal Slip for record-keeping.
- **On-Site Storage Issuance:**
    - The Site Engineer or designated personnel issue materials from on-site storage areas.
    - **Prepare Material Withdrawal Slip:** A Material Withdrawal Slip is prepared, documenting the materials being issued, the project number, the date, and the names of the issuer and receiver.
    - Both the issuer and the receiver sign the Material Withdrawal Slip.
    - A copy of the signed Material Withdrawal Slip is kept for on-site records and another copy is submitted to the Office Engineer for project documentation.

4.3. Material Tracking and Allocation:

- **Inventory Records:** The Warehouseman updates inventory records in QNE to reflect the issuance of materials, ensuring accurate tracking of material quantities and locations. They use the information from the Material Withdrawal Slips to update the records.
    - **Deliverables:** Updated Inventory Records in QNE
- **Cost Allocation:** Ensure that material costs are properly allocated to the correct project and cost code in the QNE system, using the information from the Material Withdrawal Slips.

4.4. Material Returns:

- **Unused Materials:** If materials are not used and are in good condition, they should be returned to the warehouse or designated on-site storage area.
- **Documentation:** The return of materials should be documented, typically using a Material Return Slip, and inventory records in QNE updated accordingly.

Records Generated (Deliverables)

- Material Requisition Form
- Material Withdrawal Slip
- Updated Inventory Records in QNE
