	PROCEDURAL MANUAL	
	SITE SAFETY	

4OBJECTIVE	This procedure outlines BHBI's process for managing health and safety on its construction sites. The aim is to provide a safe and healthy working environment for all employees, subcontractors, visitors, and the public, to prevent accidents and injuries, and to comply with all applicable health and safety regulations.
SCOPE	This procedure applies to all construction sites operated by BHBI and covers all activities carried out on site, from initial mobilization to final demobilization.

Responsibilities

- **Project Manager:** Overall responsibility for site safety on their projects. Ensures that adequate resources are allocated for safety and that this procedure is effectively implemented.
- **Project Engineer:** Responsible for overseeing the implementation of the Site Safety Procedure, coordinating with the Safety Officer, and ensuring that safety measures are integrated into construction planning and execution.
- **Site Engineer:** Responsible for day-to-day monitoring of site safety, ensuring that safety rules are followed, and reporting any safety concerns to the Project Engineer.
- **Safety Officer:** Responsible for developing, implementing, and monitoring the site safety program, conducting safety inspections, providing safety training, investigating incidents, and ensuring compliance with relevant safety regulations.
- **Foreman:** Responsible for supervising work crews, ensuring that they have the necessary safety training and equipment, and enforcing safety rules on site.
- **All Employees and Subcontractors:** Responsible for following all safety rules and procedures, using required personal protective equipment (PPE), reporting hazards and incidents, and actively participating in safety programs.

Procedure

1. Safety Planning and Risk Assessment:

- **Pre-Construction Risk Assessment:** Before construction begins, the Project Engineer, in collaboration with the Safety Officer, conducts a comprehensive risk assessment to identify potential hazards associated with the specific project and site conditions.
    - **Deliverables:** Pre-Construction Risk Assessment
- **Site-Specific Safety Plan:** Develop a site-specific safety plan that addresses the identified hazards and outlines the control measures to be implemented. This plan should be aligned with BHBI's overall Health and Safety Policy.
    - **Deliverables:** Site-Specific Safety Plan
- **Safe Work Procedures (SWPs) or Job Safety Analyses (JSAs):** Develop detailed SWPs or JSAs for high-risk activities, outlining the steps involved, potential hazards, and control measures.
    - **Deliverables:** Safe Work Procedures (SWPs), Job Safety Analyses (JSAs)
- **Emergency Response Plan:** Develop a site-specific emergency response plan that outlines procedures for dealing with various types of emergencies (e.g., fires, accidents, natural disasters).
    - **Deliverables:** Site-Specific Emergency Response Plan

2. Safety Training and Communication:

- **Site Inductions:** All personnel (employees and subcontractors) must complete a site-specific safety induction before starting work on site. The induction should cover site rules, hazards, emergency procedures, and the use of PPE.
    - **Deliverables:** Site Induction Records
- **Toolbox Talks:** Conduct regular toolbox talks (safety meetings) to discuss specific safety topics, review safe work procedures, and address any safety concerns. This should be done on the first day of the week.
    - **Deliverables:** Toolbox Talk Records
- **Safety Training:** Provide task-specific safety training to all personnel involved in high-risk activities (e.g., working at heights, operating heavy equipment, handling hazardous materials).
    - **Deliverables:** Training Records
- **Safety Signage:** Post appropriate safety signage throughout the site to warn of hazards and provide safety instructions.
- **Communication:** Establish clear channels of communication for safety-related matters, including reporting hazards, incidents, and near misses.

3. Site Control and Supervision:

- **Access Control:** Implement measures to control access to the construction site, ensuring that only authorized personnel are allowed entry.
- **Site Security:** Secure the site perimeter to prevent unauthorized access and theft.
- **Housekeeping:** Maintain a clean and organized worksite to minimize hazards such as slips, trips, and falls.
- **Supervision:** Provide adequate supervision of all construction activities to ensure that work is carried out safely and according to plan.
- **Regular Inspections:** The Site Engineer, Safety Officer, and Foreman conduct regular site inspections to identify hazards, monitor compliance with safety procedures, and ensure that control measures are effective.
    - **Deliverables:** Site Inspection Reports

4. Personal Protective Equipment (PPE):

- **PPE Assessment:** The Safety Officer determines the appropriate PPE required for each task based on the identified hazards.
- **Provision of PPE:** BHBI provides all required PPE to its employees free of charge. Subcontractors are responsible for providing PPE to their employees.
- **PPE Training:** Provide training on the proper use, care, and maintenance of PPE.
- **Enforcement:** Ensure that all personnel wear the required PPE at all times while on site.

5. Incident and Accident Management:

- **Incident Reporting:** Establish a clear procedure for reporting all incidents, accidents, near misses, and occupational illnesses.
    - **Deliverables:** Incident Report Forms

- **Incident Investigation:** The Safety Officer, in collaboration with the Project Engineer and other relevant personnel, investigates all incidents to determine the root causes and contributing factors.
    - **Deliverables:** Incident Investigation Reports
- **Corrective Actions:** Implement corrective actions to address the causes of incidents and prevent recurrence.
- **Emergency Response:** Implement the site-specific emergency response plan in the event of an emergency.

6. Subcontractor Safety Management:

- **Safety Requirements:** Clearly communicate BHBI's safety requirements to all subcontractors in the contract documents.
- **Pre-Start Meeting:** Conduct pre-start meetings with subcontractors to review safety expectations and procedures.
- **Monitoring:** Monitor subcontractor safety performance throughout the project.

7. Monitoring and Review:

- **Safety Audits:** Conduct regular safety audits to assess the effectiveness of the site safety program and identify areas for improvement.
    - **Deliverables:** Safety Audit Reports
- **Performance Monitoring:** Track and analyze safety performance indicators (e.g., incident rates, near-miss frequency) to identify trends and measure the success of safety initiatives.
    - **Deliverables:** Safety Performance Reports

8. Documentation and Record Keeping:

- Maintain accurate and up-to-date records of all safety-related activities, including:
    - Risk assessments
    - Site-specific safety plans
    - SWPs/JSAs
    - Training records
    - Site induction records
    - Toolbox talk records
    - Site inspection reports
    - Incident reports and investigation reports
    - Safety audit reports
    - Safety performance reports

5. Continuous Improvement:

- **Lessons Learned:** Regularly review safety performance, analyze incident data, and identify lessons learned.
- **Procedure Updates:** Update this procedure periodically to incorporate lessons learned, changes in regulations, and industry best practices.
